**Author and Reviewer Main Menu Redesign**

**User role impact: AUTHOR, REVIEWER**

This release introduces a new design for Author and Reviewer Main Menus and folders. The redesign features a new color scheme and font, while retaining all existing functionality.

**Main Menu pages:** Larger text size and more spacing between links is added to help users more easily navigate pages. (Author Main Menu shown; text and spacing is similar on Reviewer Main Menu.)

**Folders:** Redesigned Author and Reviewer folders feature an updated look and refreshed icons.

**TO CONFIGURE:**

No configuration needed. The redesigned Author and Reviewer Main menus will become a requisite feature for all publication sites with the January 2022 release.
API Enhancement for Institution Name Normalization

User role impact: ALL ROLES

This enhancement introduces an API that allows a publication to query a larger institutional dataset when information is entered in the Institution (and Secondary Institution) field and presents users with more options in the auto-suggest list. When the new API is enabled, the enhanced auto-suggest behavior will take effect wherever the Institution (and Secondary Institution) field appears in the system.

Once the user has entered three characters in the Institution (or Secondary Institution) field, the API will query the extended dataset and return a more granular list of prospective matches that also includes the city and country of each organization. Selecting an organization from the list will continue to retrieve the Institute ID.

**Note:** In its initial implementation, this API cannot be enabled for publications that use Editorial Manager's Read & Publish functionality.

Enhanced auto-suggest Institution list with city and country information shown on the Update My Information page (top) and Edit Author Details pop-up window at submission (bottom).

**TO CONFIGURE:**

Institution Name Normalization (an existing feature) must be enabled. Go to **PolicyManager > General Policies > Enable Institution Name Normalization.** Select the Enable Institution Name Normalization checkbox.

To enable the new API for the enhanced auto-suggest list, please contact your Account Coordinator.
