Manuscript Analysis API Enhancement

The Manuscript Analysis API enables publication sites to send submission files and related metadata to third-party services for analysis. A new trigger point is added to the Manuscript Analysis API feature. The new trigger occurs when an Author is notified of a Revise decision type.

TO CONFIGURE:

Go to **PolicyManager** > Configure Article Types > Add/Edit Article Type.

The new trigger, Editor Decision - Revise, appears in the list of event triggers for each Manuscript Analysis Service available to the publication.
