em **pm** **Column Sorting Enhancement** *on page 2*	This enhancement enables users to select primary and secondary sort columns for page grids that allow compound sorting.
	Information on current integrations: *Manuscript analysis services* *Repositories*

Column Sorting Enhancement

User role impact: EDITOR, PUBLISHER

This enhancement makes it easy for users to pair primary and secondary sort columns for page grids that allow compound sorting.

When a user clicks the arrow icon at the top of a column, rows in the grid are sorted by the data in that column. This is the primary sort. The user can define a second column to perform a secondary sort by holding the CTRL key (COMMAND key on a Mac) while clicking the arrow icon for the secondary sort column. Previously, the system selected the secondary sort column (e.g., manuscript number).

The grid enhancement applies to the following pages in EM:

- Assign Editor
- Batch Assign Editor
- Initiate Discussion
- Notification Services Monitoring Report
- Proposal Pipeline Report

The grid enhancement applies to the following pages in PM:

- Add Submission to [Schedule] Group
- Closed Schedule Groups
- Manage Schedule Groups
- Schedule Group Tasks Assigned to Me
- Schedule Group Tasks I Have Assigned
- Submission Tasks Assigned to Me
- View All Submissions with Production Completed

Detail of Assign Editor page: In the search results grid, arrow icons at the top of each column allow a user to sort the column values in ascending or descending order. The primary sort column is indicated by the numeral 1 in the arrow icon, and secondary sort column is indicated by the numeral 2.
